

iRISK™  
WWW.4TUNE.PT/irisk2

## Start with questions, not data:

Define, list, document, quantify, depict, navigate and report on all possible risks, failure-modes, quality attributes (QA) and any other variability or risk source affecting critical quality attributes. Brainstorm on the strategies to adopt to eliminate or mitigate specific risks.

An essential and highly intuitive tool in QbD filings, process/product life-cycle management and continuous improvement for iPad.

Navigation between all iRISK™ environments is straightforward so one can continuously edit all fields and doesn't lose track of the big picture.

Target Product Profile  
Process definition and flowsheet layout  
Ishikawa Diagrams editor  
FMEA  
Risk Priority Number analysis  
Automatic report generator  
Sharing (Multi-user, PDF, Mail, Dropbox, Etc.)
